

## MOTORIZED VEHICLES

All vehicles must abide by the arrival and departure schedules and procedures established by the Cohere Centre.

Any vehicle that drips oil or other staining solutions may not be operated within the Cohere Centre without a drip pan or dry absorption powder. Responsible parties will be charged cleaning or replacement costs for staining solutions that are not removed.

No motorized vehicle may be operated on carpeted areas under any circumstances. Exceptions may be authorized by the Operations Manager. When motorized vehicles are approved for use on carpeted areas, a protective sheet of Visqueen, tarpaulin or a comparable material must be used to eliminate damage from leaks of gas, oil, etc.

All vehicles displayed in the Cohere Centre must use drip pans and have pads under all tires.

Fuel tanks containing fuel or propane, or which have ever contained fuel or propane, shall be less than ½ full. Caps for fuel tank fill pipes shall be of the locking type and be kept locked to prevent unauthorized access. If they cannot be locked they will be taped shut.

The electrical system shall be de-energized by either removing the battery, or disconnecting both battery cables and covering them with electrical tape or other similar insulating material. The fuse to the starter must also be disconnected.

Vehicles containing propane may be driven in and positioned. The engine should remain running with the valve shut off. Allow the engine to run until the fuel in the fuel line is used up before turning the ignition off.
